

Credit Name: CSE 3130 Object-Oriented Programming 2

Assignment Name: Account, PersonalAcct, BusinessAcct

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

Error #1:

Cause: The 'PersonalAcct' is not inheriting the 'Account' class

```
public PersonalAcct(double bal, String fName, String lName, String st, String c, String pro, String post) {  
    super(bal, fName, lName, st, c, pro, post);  
}  
  
public PersonalAcct(String ID) {  
    super(ID);  
}
```

```
public class PersonalAcct {
```

Solution: Added in 'extends Account' to get rid of this error

```
public class PersonalAcct extends Account
```

```
public PersonalAcct(double bal, String fName, String lName, String st, String c, String pro, String post) {  
    super(bal, fName, lName, st, c, pro, post);  
}  
  
public PersonalAcct(String ID) {  
    super(ID);  
}
```
