Assignment Name: MetricConversion

Q: How has your program changed from planning to coding to now? Please explain?

A: This mastery for the GUI was by far the easiest. All I had to do for my outline was to use the same one as the LatinPlantNames skillbuilder. I then copied everything from that skillbuilder and only changed it to what the mastery was requiring with the given information. I made sure that the label and combo box was big enough in order not to show this after a certain word '...'. After finishing the coding, I tested out this GUI and found out no particular errors while testing it.
