Credit Name: CSE3010 - Computer Science 3
Assignment Name: LocalBankGUI

Q: How has your program changed from planning to coding to now? Please explain?

A: Most of the coding for this mastery was done by lesson from none other than Mr. Abdalla. For some sections of the mastery I had to code it myself. After completing the final mastery of the GUI chapter, I went to test it out and a few seconds later I hit a roadblock. After adding my account, where I had to input my first and last name and my beginning balance, and depositing my 'money' by inputting in my newly created account ID and the dollars that I want to deposit, the display label does not show the amount I have deposited even after pressing the 'Process transaction' button multiple times. So I looked over my code again and realized that a few sections of the code did not set the text for the display label. So I quickly fixed the program by adding the line of code for it to set the display label to the intended message. After that, I tested out the code again and realized it was not neat, specifically the last name and balance were joined together AND the button seemed a bit small since it does not fully display the "Process Transaction" words. So I went ahead and fixed both [problems, went again to test and finally no problems arised.
